For Windows software, see also our [features comparison grid](#).

The packages listed here are all under current development. Omitted are apparently "dead" packages such as Notebuilder, Notebook II, etc. In the title column, P is for Platform. The platform abbreviations are W for Windows 3.1/95/98/2000, M for the Macintosh, and D for DOS. All DOS packages listed here are known to work well under Windows.

If you are interested in reviewing a "needed" product, please contact the editor, John G. Norman, at jnorma4@attglobal.net.
